

Retagging using the Animal Logger

Example: Retagging UK 0 123456 01053 with UK0 244220 24006

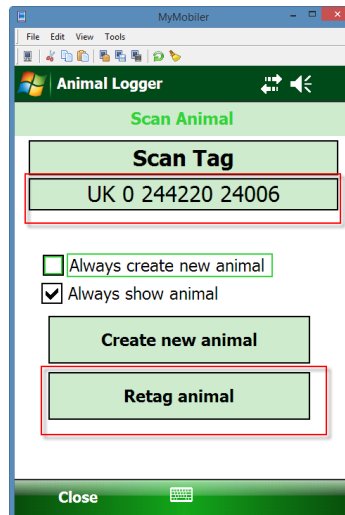

1. Send animals to the Workabout Pro (Psion) from your Farmplan package
2. Click Read Tag

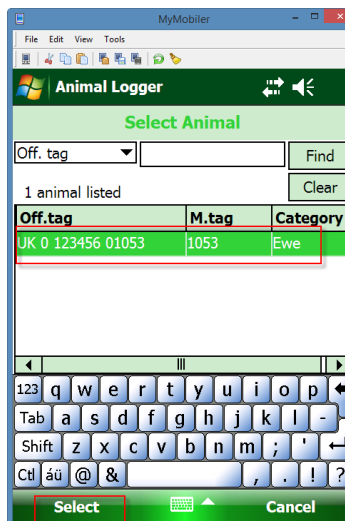

3. On the next page, untick Always create new animal and click Scan Tag

4. The new tag number will appear, click Retag Animal

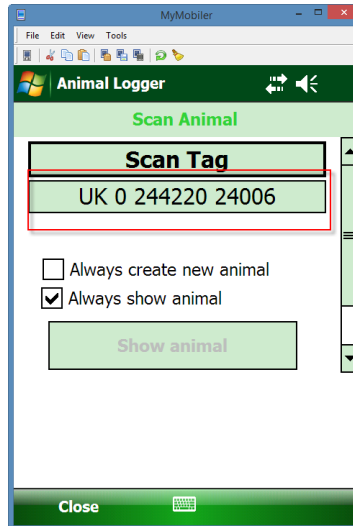

5. This next page brings up a search function, choose the animal in the list to replace the tag with the new one – be careful!

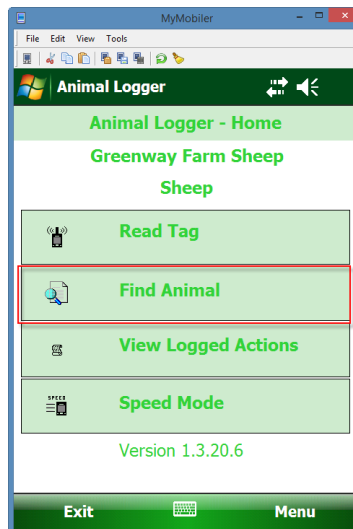

6. Agree to the message if you are sure you have the correct animal and are replacing the correct old tag

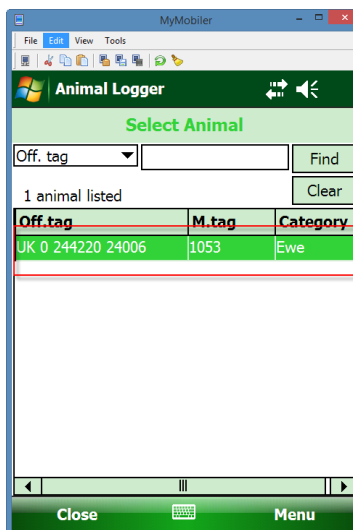

7. The new tag will now show, click Close

8. Now check the new tag is available in the Find Animal screen

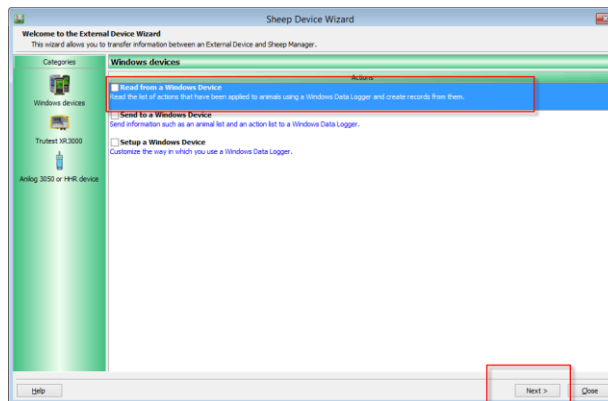

9. Here UK 0 244220 24006 is now in our list and UK 0 123456 01053 is not

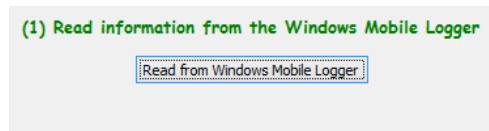

Import back into the program

1. Go to Devices at the top (also in File > Devices)
2. Choose Read from a Windows Device > Next

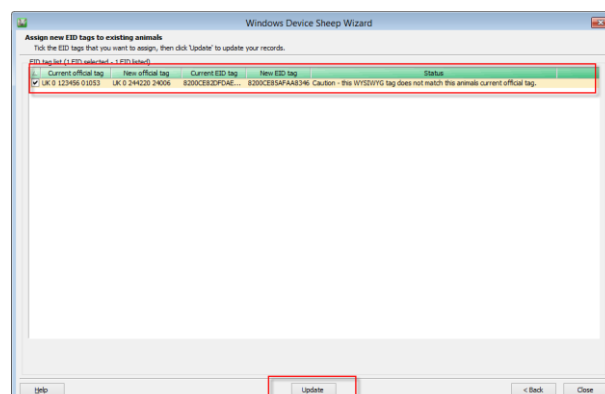

3. Select Read from a Windows Mobile Logger

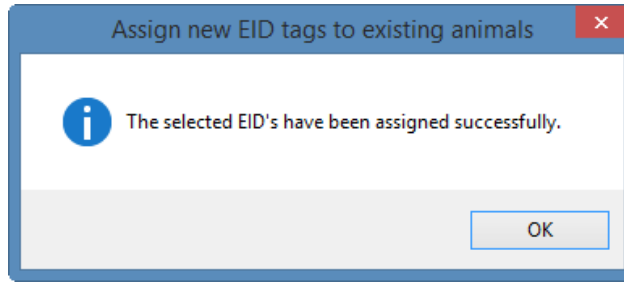

4. We can see here we have 1 tag has been reassigned

5. The next screen warns you it does not match the existing number but as long as you are happy this is correct the press update

6. You will get a message to say it has been successful

7. Assuming you are happy with everything you have imported ensure you update the logger with the new data once you are happy everything is correct

8. Now check the new tag record card and we can see the old tag listed and the new one now taking precedence and all history is saved and you do not have a duplicate record card
